

Activity File: Oh Henry, What Did You Do?

- You continue in your role as a security analyst at Wonka Corp, investigating the employees potentially selling secret recipes to Slugworth Corp.
- Your manager at Wonka Corp has identified two possible insiders who may be working with Slugworth Corp: Henry and Ruth.
- Your manager has quickly pulled some files from Henry and Ruth's computers, without their knowledge.
- Some of the files contain gibberish, but some may have useful data.
- Your manager has asked you to preview the files to see if they have readable text data that can be analyzed later.

Instructions

Using only the command line, complete the following tasks from the

/03-student/day1/oh henry/ folder in your Ubuntu VM:

1. There are two folders inside the `/03-student/day1/oh_henry/` folder. One for files captured from Henry, and one for files captured from Ruth.
 - Use the preview commands to determine which of the files contain readable text data.
2. Remove the files that contain non-readable text data.

Bonus

The files each have a timestamp at the bottom.

- Use the `mv` command to rename each file by adding the date found on the bottom of the file.
 - For example: `File1` has a date of October 11, 2019. Rename it to `file1-10 11 2019`.
