

Solution Guide: Oh Henry, What Did You Do?

- The first step is to navigate into the `students/oh_henry` folder on your VM. To do so, run the following command:
 - `cd /03-student/day1`
- Navigate to Henry's Folder:
 - `cd oh_henry`
- There are many files in this directory. You can preview each file by using `head`, `more`, or `less`. For example:
 - `head do.txt`or
 - `more do.txt`
- Most of the files contain non-ASCII data, as they are actually image files.
- The three files that contain text data are:
 - Henry: `do.txt sp.txt wp.txt`
 - Ruth: `l8.txt hy.txt ud.txt`
- Delete the other files:
 - `rm dj.txt bb.txt b7.txt sd.txt ta.txt`
- Confirm that only the correct files remain by running:
 - `ls`
 - The three files that should remain: `do.txt sp.txt wp.txt`
- Complete this same process in Ruth's folder.
 - The files that should remain: `l8.txt hy.txt ud.txt`

Bonus

- To view the date on the bottom of each file, run:
 - `tail do.txt`
- On the bottom of the file called `do.txt` is the date October 10, 2019. To rename this file, run:
 - `mv do.txt do.txt_10_13_2019`
- Follow this same process for all the files. The final results for Henry:
 - `do.txt_10_13_2019`
 - `sp.txt_10_14_2019`
 - `wp.txt_10_15_2019`
- The final results for Ruth:
 - `18.txt_10_13_2019`
 - `hy.txt_10_14_2019`
 - `ud.txt_10_15_2019`
