

Activity File: Take Five and Practice the Command Line

- You are playing the role of a security analyst at Wonka Corp.
- Wonka Corp believes one of their employees might be selling secret recipes to Slugworth Corp.
- You have been tasked with creating evidence files for email, logs, and web access.
- These files are currently empty, but will be used later to organize your investigation notes on the rogue employee.

Instructions

Using only the command line, complete the following tasks from within the `/03-student/day1/take_5/` folder in your Ubuntu VM:

1. Create a folder called `Internal_Investigation_Employee_A`.
2. Navigate into the `Internal_Investigation_Employee_A` folder.
3. From within the `Internal_Investigation_Employee_A` folder, print the working directory to confirm you are in the correct place.
4. Create three files inside the `Internal_Investigation_Employee_A` folder:
 - `email_evidence`
 - `log_evidence`
 - `web_evidence`
5. Delete the file called `web_evidence` as you realized Wonka has no web logs captured.
6. Display (list) all the files created.
7. Clear the terminal window.

Hint: Don't be afraid to ask your neighbor or TA for help if you're having trouble with a

command.
