Activity File: Finding Your Way

- In this activity you will continue your role as a security analyst at Wonka Corp.

- Your manager has identified why PeanutButtery.net was targeted: Henry had hidden a secret recipe for a revolutionary Wonka candy within the file system, and Slugworth was trying to find it.

- Your manager at Wonka needs you to search through the files and file directories of the PeanutButtery.net server to find the hidden recipes in its file system.

- You are tasked with scanning the directories of the site PeanutButtery.net to uncover the secret recipes hidden by Henry

Instructions

Using only the command line, complete the following tasks in the `/03-student/day2/finding_your_way/` folder in your Ubuntu VM:

1. Navigate into the `PeanutButtery.net` directory.

2. Find all directories that have the word "secret" in their directory name.

3. Find all files that have the word "recipe" in their file name.

Bonus

You manager believes the recipe is for a peanut candy, and would like you to narrow your search to include only those recipes. - Use a single command to find all the files that have the words "recipe" and "peanut" in their name.

Hint: Research how to use the AND functionality with the `find` command.
